

---

We are a factory with over 20 years of experience in manufacture of wooden windows and doors. Our products meet the highest standards and their quality and security have been certified by Exova BM Trada, NEPCon and Mobilne Laboratorium.

At the same time, they are stylish and elegant, and without a doubt, contribute to the perfect look of both interiors and exteriors.

We offer a range of high quality wood, including pine, oak and meranti, which is sourced mainly from Eastern Europe. All our suppliers are FSC certified and most of our timber comes from at least 80-year- old managed forests. The woodwork is laminated to ensure its durability - resistance to deformation, weather conditions and wear and tear. It can also be easily refreshed by painting or varnishing.

Our continuous investments in the production processes allow us to develop new technologies to enhance the quality of our current products, and to successively introduce new ones.

While we are committed to meeting the highest standards of production, we also remember about the most valuable assets of our company - people - our specialists are our greatest strength. Therefore, we do our utmost to provide them with a friendly and safe working environment and we encourage and help them to develop their knowledge and skills.

Wood is one of the most important natural construction materials in the world. Due to its high mechanical treatment ability, excellent isolating properties, and attractive appearance, wood has become one of the most favourite materials in manufacture of window frames around the world. Caring about the natural environment, at SunVu Windows, we only use wood from suppliers who have been FSC certified. This certificate is awarded only to companies whose wood is sourced from sustainably managed forests. This ecological approach allows us to reap benefits from the nature without disrupting its balance at the same time.

## Sash Weights

Sliding Sash Weights windows are the most recognisable traditional English windows - they have been a characteristic feature of UK's architecture since the 18th century.

Two vertically sliding sashes are operated by two independent weight and cord mechanisms introduced by Robert Hooke in 1670. Our selection of best quality timber and the hand finish we add guarantee a unique and stylish look.

## Sash Spiral Balance

Sliding Sash Spiral Balance windows are a modern version of windows designed back in the 17th century. Weights and cords - the original opening mechanism - have been replaced by a spring balance system manufactured by Caldwell for easier sliding. However, the traditional English look has been entirely retained. Vertical opening allows for the space around the window to be fully utilised. The Elegance option with the springs fully concealed within the frame adds an extra piece of aesthetics to the window.

## Sash Tilt & Slide

Sash Tilt & Slide windows are an advanced variant of spiral balance sash windows with the extra feature of both sashes tilting, which makes their cleaning easier - they can be given a quick wipe down with a cloth and be gleaming again without stepping outside.

## Mock Sash

Sash Mock & Slide windows are a variant of spiral balance sash windows for those who would like to retain the traditional look of English windows but do not need a complex opening mechanism and look for a more economical option. Here the bottom sash slides on springs, whilst the top sash tilts to the outside.

## Nordic

Nordic style windows are very popular in Scandinavian countries owing to their construction.

Taking into account harsh weather conditions, they have been designed to open outwards. This increases insulation and prevents draughts when strong winds push masses of air against the window.

We manufacture 5 types of Nordic windows - top hung, top swing, side hung, side swing and fixed.

Top hung and side hung open out gradually, which prevents them from closing in case of draughts.

Top swing and side swing can be turned round, which allows easier cleaning from the inside.

All our Nordic style windows are equipped with high quality SPILKA fittings.

## Flush Casement

Flush Casement windows are typical English windows opening outwards. The sashes are fitted flush into the frame, which creates a smooth and elegant look of the window. Decorative glazing bars can be added to resemble traditional sash windows. Opening outside gives the benefit of avoiding damaging of curtains or blinds.

## Stormproof Casement

Stormproof Casement windows are often chosen in areas with harsh weather conditions. Opening outwards brings two main advantages – enhanced insulation during strong winds which push the protruding wings against the frame, plus the space around the window can be fully utilised. They can also be complemented with decorative bars to look more traditional.

## IV 68, IV 78

Eurostyle Inwards Opening Tilt & Turn IV68 and IV78 windows are the preferred choice in Continental Europe. They open to the inside, which grants an easy access for cleaning. However, the more valued feature is that they can be tilted, which improves the room ventilation.

## Folding Doors

Folding Doors are very popular as patio or terrace doors allowing the natural light to come through to the maximum amount. They also blur the border between the interior of the house and the outside world. They create a unique modern character and visually expand the living space. There are various opening systems to match the design of the room and the customers' needs. Folding doors are also available with aluminium cladding on the outside.

## French Doors

French Doors are a type of balcony doors often found in the UK. They feature a classical elegant look and often they are complemented with decorative glazing bars, perfectly matching the traditional English style. French doors are used both as terrace doors, separating the living area from the patio outside, and as internal doors dividing the living area into individual parts.

## Sliding Doors

Sliding Doors are a type of balcony windows which perfectly complement modern buildings. These windows consist of two wings, with one horizontally sliding parallel to the walls. Thanks to the sliding system, they do not take any space inside the room or garden, which allows for the window area to be arranged without any restrictions. Sliding doors integrate the house and the garden into one area, which has a lot of advantages, both functional and visual.

## Aluminium

There is nothing quite like aluminium – light yet strong, aluminium windows and doors can be configured into a nearly endless variety of combinations. Thanks to narrow frames, the focus is placed on the glass and the view it offers.

Apart from modern and elegant look so much liked by architects and builders, aluminium frames show a distinct durability – resistance to weather conditions and mechanical deformation, are easy to maintain, and their high quality profile systems ensure excellent thermal insulation.

Our offer includes: outwards and inwards opening windows, as well as entry, internal, folding and sliding doors, and fixed elements.

We use hardware of renowned brands:
